

You can help your child by preparing for the visit to the doctor using this checklist

We have:

- Taken the test
- Registered fluid intake and output using the **Void meter**
OR downloaded and used the Drydawn app to help record intake and output
- Registered how bedwetting is affecting your child using the **Mood meter**
- Registered the current method of care your child is using via the **Help meter**

Take some time to prepare an answer for a couple of questions that your doctor will most likely ask you.

1. Question one will be here

2. Question two will be here
